 N/A

HISTORY/FACTS/ISSUES:

On March 25, 2008, the Board of County Commissioners entered into a Continuing Engineering Services Agreement with Springstead Engineering, Inc..

Springstead Engineering has submitted an IPO to provide Engineering Services for Design and Permitting of the Relocated WRA "D" (Sandalwood Pond) Development of Final Plans and Specifications for Bidding and Construction for the C-468 2 to 4-Lane Project. The services to be provided by Springstead Engineering consist of designing the pond to be incorporated into the existing roadway design plans for the 4-laning of C-468. This will include preliminary design, geotechnical exploration and testing for soil and groundwater properties, threatened and endangered species survey, environmental review of wetland line, survey of land and easements, computer modeling and design of the storm water system and pond in Basin D, and final design and permitting of the pond through SWFWMD, including responses to comments.

This task order also includes preparation of final plans and documents for bidding the C468 4 laning project, and work with Progress Energy related to their construction permits and easements for relocating their lines from north of C468 to south of C468, facilitating both the 4 laning of C468 and the C468/FL TPK interchange project.

This task order is contingent upon final acceptance by the BOCC of the Sandalwood Pond offer.
