

CR 501 Preliminary Engineering Study, from C-468 to C-470

Sumter County is performing a Preliminary Engineering Study for CR 501, from C-468 to C-470. The purpose of the study is to determine the roadway and intersection geometry to accommodate the future traffic demand. Various typical sections and roadway design improvements will be evaluated to determine the economic, environmental, social benefits and impacts associated with each alternative. This comparative analysis, together with input received from the public, will serve as the basis for selection of the recommended improvements.

The project is located in unincorporated Sumter County, adjacent to Wildwood City limits. The project length is approximately 3.2 miles. The project limits are illustrated on the following page.

The project began in November 2014 and is anticipated to last 12 months. Three public meetings will be held to obtain public input on the project. A Public Agency Kickoff meeting will be held in early 2015. The purpose of the public agency meeting is to provide a project overview and receive input from elected and appointed public officials. A Public Alternatives meeting will be held in the Spring of 2015. The purpose of the Public Alternatives meeting is to present to the public the results of the study to date and obtain comments on the viable alternatives being considered. A Public Hearing will be held in the Fall of 2015 to discuss the results of the study and present the preferred alternative for review and comment. The meeting will provide opportunity for the public to make oral statements that will become part of the official Public Hearing transcript. The public comments will be utilized to determine the recommended alternative in the final study documentation.

A general project schedule is provided below.

If you have any questions regarding this project, would like to schedule a meeting or would like to submit a written comment or question, please contact:
