Dear Mrs. Farnsworth - I have 2 concerns for the effluent disposal site - the ecology of this property, particularly the forested wetlands on it's north side, and the odor. Mount Sumter, as i call our landfill, seems to have gotten exponentially taller in the past year & the stench has begun to bother us & our neighbors. Lake Panasoffkee & Sumterville have become the armpit - no...the crotch! - of Sumter County; so, the effluent may as well be spread across from the landfill. But what can you do to prevent odors & protect what's left of the ecology of that 360 acres? Plant trees or shrubs along the road? May i request that you use native trees or shrubs?
Thank you for your service,
